

Professional Objective

User experience designer with over 20 years experience, who is passionate about solving complex pain points for the user. Robust experience in user experience, including visual design, information architecture, user journeys, user research, and prototyping. Work well with product owners and developers in a scaled agile framework.

Qualifications Summary

User Experience Design - Over 20 years experience solving usability issues for the end user, including both web applications and physical consumer devices. Solve user problems by Design Thinking Process in an agile environment. Work closely with developers to support and achieve desired design/development stories.

Visual Design – Over 18 years of experience in visual design, including, brand creation, page layout, wireframes, storyboard, UI conception, navigation design, color design, and photography. Experienced and up-to-date on many of the web design/development tools such as Axure, Adobe CC, Sketch, Invision, Abstract. Strive to learn new tools to expand my arsenal of tools.

Project Management – Responsible for completing many projects, dealing with consumer electronics and web, delivered on schedule and within budget. Directed, planned, and executed products that were later showcased at CES.

Skills

- User Research
- Information Architecture
- Wireframing
- Photography
- Interaction Design
- Mobile App Design
- Prototyping
- 3D
- Visual Design
- Responsive Design
- HTML & CSS

Professional Experience

Dell Technologies 11/2021 – 02/2024

Atlanta, Georgia US

PC manufacturer and Enterprise Solutions

Principal Interaction/Visual Designer

Worked with multiple projects in commercial/enterprise IT management applications. Steered product design from concept to development using UX tools to distill complex problems into intuitive, clean, user friendly designs. Created information architectures, applied and grew existing design languages and systems, while delivering the appropriate content to development partners (workflows, behavioral specifications, redlines, interactive prototypes, etc.) Collaborated with other designers to reconcile design/features/functionality to a cohesive UI environment.

Key Accomplishments:

- Conducted usability research for current software development.
- Conducted observational voice of customer research to assess user wants and needs, and to address particular pain points users might have.
- All designs accompany a prototype, to illustrate user behavior, and interactions.
- Part of design council, to maintain internal design patterns.
- Work across multiple countries to collaborate with designers/developers to deliver end to end product design.

BrightDrop - General Motors 11/2020 – 10/2021

Atlanta, Georgia US

1st and Last Mile Electric Transport Solution

User Experience Designer

Work closely with developers and engineers to create an immersive and intuitive experience for the end user. Work closely with product manager, software manager, to create new interactions and user experiences that are based on user testing and voice of customer data. Develop wireframes, prototypes to test and learn from customers and stakeholders. Create, maintain, rich UI assets for engineering handoff and development. Defined interaction flow and a/b testing to create a more intuitive workflow for the end user. Worked closely with hardware group to support software features, thereby extending the features for end users.

Key Accomplishments:

- Conducted VOC research via usertesting.com for current software development.
- Created several interactive prototypes to visually interact with future features of application development.
- Create and maintain design resources for developers as well as stakeholders.
- Created design language for application development.
- Support for native mobile design and development.
- continuous support for interaction/user flow, for developers in the sprint cycle.

TEK Systems - Contractor for Assurant 11/2019 – 09/2020

Atlanta, Georgia US
Consumer Insurance Industry

Senior User Experience Designer

Created and implemented designs which make human-computer interactions intuitive, easy, adaptive, consistent, and relevant to users. Ensured that the design satisfies the functionality and also considered the emotions that compromises the functionality for the user. Participated in the discovery, definition, design, development, and deployment processes of the software delivery lifecycle – researching and understanding users, creating user journey maps and personas, defining wireframes, information architecture, and style guides. Produced interface designs, validating assumptions using usability testing and supported the front end development in an agile environment.

Responsible for translating the requirements for a product's optimal functionality into interactive solutions by incorporating market research and psychology, design of the human-computer interface for optimal effectiveness, inclusion of easily navigable content, graphic/information design and finishing for maximum aesthetic appeal.

Key Accomplishments:

- Delivered timely design, one sprint ahead, so that developers could pick up the story without constraint from the design.
- Created interactive prototypes to be available to the developers as well as stakeholders, to review the workflow.
- Worked across multiple scrum teams, participating in scrum ceremonies, and delivered design assets, prototypes, developer support, etc.
- Worked closely with stakeholders, product owners, to ideate on future functionality and needs from a user centered design/development framework.
- Supported the design infrastructure team to develop design language for the company.

Honeywell International 09/2016 – 11/2019

Atlanta, Georgia US

Oil and Gas Industry - Honeywell Connected Enterprises – Honeywell Connected Plant

Senior User Experience Designer

Designed modern cloud-based UI, focused to bridge the gap between traditional Excel based data entry into distributed/multi-tenant environments, and improving workflow and efficiency for the end user. Work in a SAFe Scrum environment, where designers are embedded in the scrum team to deliver design one sprint ahead as well as contribute to the review process for completeness and quality. Managed expectations and deliverables by working with key stakeholders, product owner, and developers to adjust design for the needs of end users as well as expectations of deliverables outlined by PO. Manage and guide front-end developers with strategy and detailed specifications in program increment.

Key Accomplishments:

- Active discussions with Product Management, Marketing as well as inquire with end users to make sure design reflects usability and intent.

- Designed the first user interface to interact within the cloud environment at Honeywell, focusing on asset monitoring within a plant.
- Designed and developed a design system that is common throughout the Honeywell Connected Plant single pane of glass initiative.
- Designed and managed the development of builder tools that interacts with large sets of data in an industrial plant digital twin, which was previously maintained in Excel.
- Designed a user interface with completed templates and click and drag features, to develop digital twin of plant environments quickly and easily.
- Conducted Observational Voice of Customer (User Research) for end users utilizing the builder tools and enhancing the workflow to meet their rigorous configuration timelines.

K2 Firm LLC, Contractor for Northrop Grumman 03/2014 – 09/2016

Warner Robins Air Force Base, Georgia US
Defense Industry

Senior User Experience Designer

Development of advanced user interfaces for web and proprietary applications utilized by the USAF. Abundant experience working on large, complex web sites utilizing the latest technology and trends available for all device platforms. Utilized expertise in user experience concepts to provide end users the best experience possible, and future proofing website to adhere to government web compliance standards.

Key Accomplishments:

- Introduction of key web tools and strategy to integrate into existing proprietary web interface of PLM products.
- Complete overhaul and redesign of web presence brand.
- Developed online tutorials to complement existing USAF TO, with video and review tests.
- Usability testing of key systems that needed to adhere to common usability guidelines and US government compliance.
- Overhaul and redesign of main gateway to proprietary applications.
- Establishment of website workflow within the design and development team.

Mercer University 07/2008 – 03/2014

Macon, Georgia US

Institution of Higher Learning

Senior Web Designer

Researched, designed, developed, and launched many websites including the IT website, utilizing usability techniques to analyze audience needs and expectations. Systematic updates and new content using responsive design, CSS 3, jQuery, and HTML 5. Periodic usability test conducted to determine best user experience on websites. Heuristic evaluation of websites to design best design for front-end interface. Collaborated with team members to institute a new content management system for the university. Worked in a cross-functional team to re-design the University website.

Key Accomplishments:

- Introduced responsive design and integrated to existing CMS.
- User interface design for numerous websites, landing pages, forms, etc.
- Revitalized branding, photos, design, and content for IT websites.
- Designed with usability results, in order to present information, users look for most.
- Work with Faculty and staff to design, create, and maintain over 20,000 university website pages.
- Instituted a new content management system, to promote self-maintenance of web pages, using PaperThin CommonSpot.
- Designed and implemented cross-browser web pages, that is friendlier to mobile phones and mobile devices.

Education

Mercer University - School of Engineering
Macon, GA US
Bachelor's Degree - 8/1997
Major: Technical Communication
Minor: Graphic Design
